

Technology to help you increase patient satisfaction, simplify inventory and reduce run-outs.

Medipure™ Alert N₂O

Nitrous Oxide Cylinder with Content Indicator

As a caregiver, you know that if nitrous oxide runs out unexpectedly, a medical procedure could be interrupted.

The physical properties of nitrous oxide are different than most other medical gases. In a cylinder, nitrous oxide under pressure and at room temperature, exists as a liquid. When in use, the pressure remains constant until the last of the liquid vaporizes. The pressure then drops quickly, giving you only minutes to change to a full cylinder.

With *Medipure Alert N₂O*, Praxair's portable nitrous oxide cylinder, advance notice is given. When the contents are low, it will be visible through the contents indicator and you will hear an alert.

FEATURES AND BENEFITS

- **Easy-to-read contents indicator** – Visible through the clear window and color coded
- **Audible alarms** – Sounds at 325 PSI / 120 liters
- **Visual alarms** – LED lights flash red to indicate low content
- **Lightweight construction** – 40% lighter than steel for increased mobility
- **Improve patient satisfaction** – Reduce potential therapy interruption
- **Minimize potential run-outs** – Eliminate emergency inventory requests
- **Ready to use** – CGA compliant for use with appropriate delivery device or regulator
- **Convenient** – Content indicator is permanently attached and system is maintained by Praxair

* approximate based on withdrawal rate of 2 LPM
